

Humic Acids work to Create Healthy Soil Conditions.

ProHumic™ contains liquid humic acid extracted from Leonardite. Humic acid is a naturally occurring organic substance found in soils, coal and peat, resulting from the decomposition of organic matter, particularly dead plants. It has a high cation exchange capacity which serves to chelate (collect) plant food elements and release them as the plant requires. The chelation process holds the nutrients in the soil solution and prevents their leaching and runoff. Humic acids will improve humus content in the soil for better tilth, water and nutrients retention and soil aeration. Seed germination and plant root and top growth are enhanced.

Use ProHumic™ to Improve Soil Productivity!

ProGreenAg.com

An Excellent Solution for Most Soil Related Issues.

Healthy soil has beneficial microbes that actually protect your crops from disease. Soil microbes of the various bacillis families, streptomyces, penicillium, etc., all produce secretions that kill or suppress harmful fungi, molds and pathogenic bacteria. Some bacillus produce a substance called phytoalexin that not only helps control disease, but nematodes too.

TRACE MINERALS

There are more than 70 trace minerals in ProHumic. These trace minerals are vitally important to grow healthy high-yield crops. Trace minerals help to create a plant that is more resistant to insect pressure, frost, drought and every other adverse condition that limits a plant's growth.

- Effective
- Higher Plant Yields
- Higher Protein Levels
- Higher Nutritional Values
- Very Efficient & Affordable
- Disease & Pest Resistance
- Stronger Plant Immune System

Non-Burning
Low Salt Index
Less Volitization
Long Term Stability
Reduces Plant Stress
Controlled Slow Release
Acts as a sticker/spreader
Use either as a foliar or soil apply

Our unique blend of humic acids, cultured soil bacteria and trace minerals can be easily applied with other liquid fertilizers allowing you to have spectacular results!

- Excellent Starter
- Improves Seed Bed
- Increases Germination
- Vastly Improves Root Development
- Boosts Soil Life
