

ProGreen AG Protocol: Trees/Shrubs

*Use only your normal fertilizer application at the beginning of the season.

(1) First Week: 3-gallons of Calcium per acre (Do not mix with phosphorus or potassium) apply directly where plants are located and use plenty of water (at least 20 gallons per acre).

(2) 15 Days after planting: Foliar feed 1 gallon of X-14 with 1 quart of Pro Alga care along with 10oz of SHOCK per batch (Note: the SHOCK is used to bring the waters PH to 5 or less).

(3) 30 Days after planting: Foliar feed 1 gallon of X-14 with 1 quart of Pro Alga care along with 10oz of SHOCK per batch (Note: the SHOCK is used to bring the waters PH to 5 or less).

(4) 60 Days after planting: Foliar feed 1 gallon of X-14 with 1 quart of Pro Alga care along with 10oz of SHOCK per batch (Note: the SHOCK is used to bring the waters PH to 5 or less).

(5) 90 Days after planting: Foliar feed 1 gallon of X-14 with 1 quart of Pro Alga care along with 10oz of SHOCK per batch (Note: the SHOCK is used to bring the waters PH to 5 or less).

*Notes: All foliar applications must be applied directly to the plants themselves. The 3 gallons of calcium per acre must be applied to the soil where the plants reside. Please apply 1 gallon per acre with 20 gallons of water. Please don't mix Calcium with Potassium and Phosphorus under any circumstances.
